**CONSUMER PRICE INDEX – SEPTEMBER 2023**

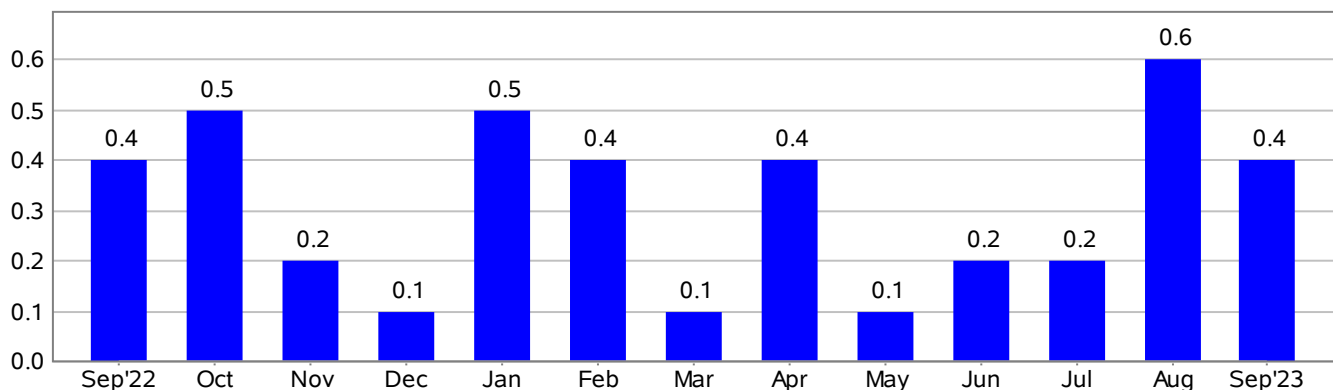

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.4 percent in September on a seasonally adjusted basis, after increasing 0.6 percent in August, the U.S. Bureau of Labor Statistics reported today. Over the last 12 months, the all items index increased 3.7 percent before seasonal adjustment.

The index for shelter was the largest contributor to the monthly all items increase, accounting for over half of the increase. An increase in the gasoline index was also a major contributor to the all items monthly rise. While the major energy component indexes were mixed in September, the energy index rose 1.5 percent over the month. The food index increased 0.2 percent in September, as it did in the previous two months. The index for food at home increased 0.1 percent over the month while the index for food away from home rose 0.4 percent.

The index for all items less food and energy rose 0.3 percent in September, the same increase as in August. Indexes which increased in September include rent, owners’ equivalent rent, lodging away from home, motor vehicle insurance, recreation, personal care, and new vehicles. The indexes for used cars and trucks and for apparel were among those that decreased over the month.

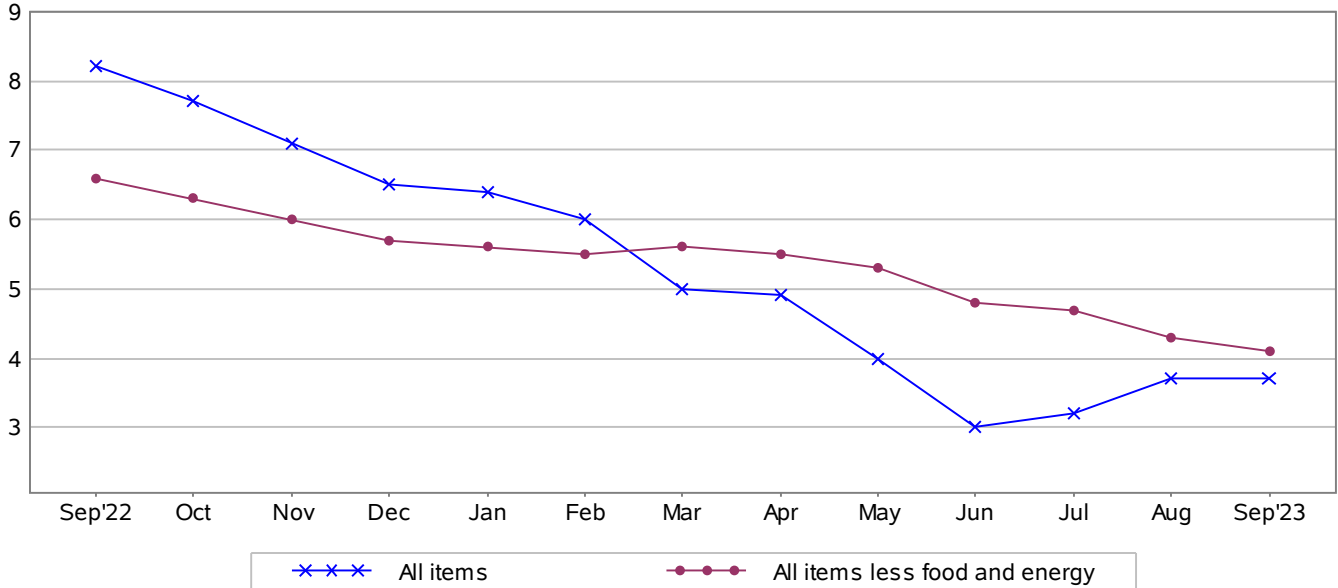

The all items index increased 3.7 percent for the 12 months ending September, the same increase as the 12 months ending in August. The all items less food and energy index rose 4.1 percent over the last 12 months. The energy index decreased 0.5 percent for the 12 months ending September, and the food index increased 3.7 percent over the last year.

## **Food**

The food index rose 0.2 percent in September, as it did in the previous two months. The index for food at home increased 0.1 percent over the month, after rising 0.2 percent in August. Three of the six major grocery store food group indexes increased over the month. The index for meats, poultry, fish, and eggs rose 0.5 percent in September as the index for pork increased 1.6 percent. The index for other food at home increased 0.3 percent over the month and the index for dairy and related products rose 0.1 percent.

The index for cereals and bakery products decreased 0.4 percent in September, the first decline in that index since June 2021. The fruits and vegetables index was unchanged over the month, as was the nonalcoholic beverages index.

The food away from home index rose 0.4 percent in September. The index for limited service meals and the index for full service meals each increased 0.4 percent.

The food at home index rose 2.4 percent over the last 12 months. The index for cereals and bakery products rose 4.8 percent over the 12 months ending in September. The dairy and related products index decreased 0.2 percent over the year. The remaining major grocery store food groups posted increases ranging from 0.2 percent (meat, poultry, fish, and eggs) to 4.2 percent (other food at home).

The index for food away from home rose 6.0 percent over the last year. The index for limited service meals rose 6.4 percent over the last 12 months, and the index for full service meals rose 5.1 percent over the same period.

## **Energy**

The energy index rose 1.5 percent in September after increasing 5.6 percent in August. The gasoline index increased 2.1 percent in September, following a 10.6-percent increase in the previous month. (Before seasonal adjustment, gasoline prices rose 0.6 percent in September.)

The index for electricity rose 1.3 percent in September, after increasing 0.2 percent in August. The index for fuel oil also rose in September, increasing 8.5 percent. The natural gas index decreased 1.9 percent over the month, following a 0.1-percent increase in August.

Despite the September monthly increases, the energy index fell 0.5 percent over the past 12 months, with its components mixed. The natural gas index fell 19.9 percent, and the fuel oil index fell 5.1 percent over the span. The gasoline index increased 3.0 percent over the last 12 months, while the index for electricity rose 2.6 percent over the last year.

## **All items less food and energy**

The index for all items less food and energy rose 0.3 percent in September, as it did in August. The shelter index increased 0.6 percent in September, after rising 0.3 percent the previous month. The index for rent rose 0.5 percent in September, and the index for owners' equivalent rent increased 0.6 percent over the month. The lodging away from home index increased 3.7 percent in September, ending a string of 3 consecutive monthly decreases.

The shelter index was the largest factor in the monthly increase in the index for all items less food and energy. Among the other indexes that rose in September was the index for motor vehicle insurance,

which increased 1.3 percent after rising 2.4 percent the preceding month. The indexes for recreation, personal care, new vehicles, and household furnishings and operations also increased in September.

The medical care index rose 0.2 percent in September, as it did in August. The index for hospital services increased 1.5 percent over the month, and the index for physicians' services was unchanged. The prescription drugs index fell 0.7 percent in September.

The index for used cars and trucks fell 2.5 percent in September, after decreasing 1.2 percent in August. The apparel index declined 0.8 percent over the month, and the communication index was unchanged.

The index for all items less food and energy rose 4.1 percent over the past 12 months. The shelter index increased 7.2 percent over the last year, accounting for over 70 percent of the total increase in all items less food and energy. Other indexes with notable increases over the last year include motor vehicle insurance (+18.9 percent), recreation (+3.9 percent), personal care (+6.1 percent), and new vehicles (+2.5 percent).

### **Not seasonally adjusted CPI measures**

The Consumer Price Index for All Urban Consumers (CPI-U) increased 3.7 percent over the last 12 months to an index level of 307.789 (1982-84=100). For the month, the index increased 0.2 percent prior to seasonal adjustment.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) increased 3.6 percent over the last 12 months to an index level of 302.257 (1982-84=100). For the month, the index increased 0.2 percent prior to seasonal adjustment.

The Chained Consumer Price Index for All Urban Consumers (C-CPI-U) increased 3.7 percent over the last 12 months. For the month, the index increased 0.2 percent on a not seasonally adjusted basis. Please note that the indexes for the past 10 to 12 months are subject to revision.

**The Consumer Price Index for October 2023 is scheduled to be released on Tuesday, November 14, 2023, at 8:30 a.m. (ET).**

### **Seeking Feedback on News Release Format Changes**

The Bureau of Labor Statistics (BLS) is implementing a substantial change to the format of our news releases over the next few years. Our objective is to improve readability, accessibility, and consistency while maintaining our high standard of accuracy. Changes include easy-to-read bullets and interactive charts. News release tables will be published with the release in Excel format only.

The Consumer Price Index news release prototype is currently available for feedback on the Redesigned News Releases beta webpage at [www.bls.gov/beta/redesigned-news-releases.htm](http://www.bls.gov/beta/redesigned-news-releases.htm).

## Technical Note

### Brief Explanation of the CPI

The Consumer Price Index (CPI) measures the change in prices paid by consumers for goods and services. The CPI reflects spending patterns for each of two population groups: all urban consumers and urban wage earners and clerical workers. The all urban consumer group represents over 90 percent of the total U.S. population. It is based on the expenditures of almost all residents of urban or metropolitan areas, including professionals, the self-employed, the poor, the unemployed, and retired people, as well as urban wage earners and clerical workers. Not included in the CPI are the spending patterns of people living in rural nonmetropolitan areas, farming families, people in the Armed Forces, and those in institutions, such as prisons and mental hospitals. Consumer inflation for all urban consumers is measured by two indexes, namely, the Consumer Price Index for All Urban Consumers (CPI-U) and the Chained Consumer Price Index for All Urban Consumers (C-CPI-U).

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) is based on the expenditures of households included in the CPI-U definition that meet two requirements: more than one-half of the household's income must come from clerical or wage occupations, and at least one of the household's earners must have been employed for at least 37 weeks during the previous 12 months. The CPI-W population represents approximately 30 percent of the total U.S. population and is a subset of the CPI-U population.

The CPIs are based on prices of food, clothing, shelter, fuels, transportation, doctors' and dentists' services, drugs, and other goods and services that people buy for day-to-day living. Prices are collected each month in 75 urban areas across the country from about 6,000 housing units and approximately 22,000 retail establishments (department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments). All taxes directly associated with the purchase and use of items are included in the index. Prices of fuels and a few other items are obtained every month in all 75 locations. Prices of most other commodities and services are collected every month in the three largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visit, telephone call, web, or app collection by the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are aggregated using weights, which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. For the CPI-U and CPI-W, separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 23 selected local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period. For the C-CPI-U, data are issued only at the national level. The CPI-U and CPI-W are considered final when released, but the C-CPI-U is issued in preliminary form and subject to three subsequent quarterly revisions.

The index measures price change from a designed reference date. For most of the CPI-U and the CPI-W, the reference base is 1982-84 equals 100. The reference base for the C-CPI-U is December 1999 equals 100. An increase of 7 percent from the reference base, for example, is shown as 107.000. Alternatively, that relationship can also be expressed as the price of a base period market basket of goods and services rising from \$100 to \$107.

## Sampling Error in the CPI

The CPI is a statistical estimate that is subject to sampling error because it is based upon a sample of retail prices and not the complete universe of all prices. BLS calculates and publishes estimates of the 1-month, 2-month, 6-month, and 12-month percent change standard errors annually for the CPI-U. These standard error estimates can be used to construct confidence intervals for hypothesis testing. For example, the estimated standard error of the 1-month percent change is 0.03 percent for the U.S. all items CPI. This means that if we repeatedly sample from the universe of all retail prices using the same methodology, and estimate a percentage change for each sample, then 95 percent of these estimates will be within 0.06 percent of the 1-month percentage change based on all retail prices. For example, for a 1-month change of 0.2 percent in the all items CPI-U, we are 95 percent confident that the actual percent change based on all retail prices would fall between 0.14 and 0.26 percent. For the latest data, including information on how to use the estimates of standard error, see [www.bls.gov/cpi/tables/variance-estimates/home.htm](http://www.bls.gov/cpi/tables/variance-estimates/home.htm).

## Calculating Index Changes

Movements of the indexes from 1 month to another are usually expressed as percent changes rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The following table shows an example of using index values to calculate percent changes:

	<b>Item A</b>	<b>Item B</b>	<b>Item C</b>
<b>Year I</b>	112.500	225.000	110.000
<b>Year II</b>	121.500	243.000	128.000
<b>Change in index points</b>	9.000	18.000	18.000
<b>Percent change</b>	$9.0/112.500 \times 100 = 8.0$	$18.0/225.000 \times 100 = 8.0$	$18.0/110.000 \times 100 = 16.4$

## Use of Seasonally Adjusted and Unadjusted Data

The Consumer Price Index (CPI) program produces both unadjusted and seasonally adjusted data. Seasonally adjusted data are computed using seasonal factors derived by the X-13ARIMA-SEATS seasonal adjustment method. These factors are updated each February, and the new factors are used to revise the previous 5 years of seasonally adjusted data. The factors are available at [www.bls.gov/cpi/tables/seasonal-adjustment/seasonal-factors-2023.xlsx](http://www.bls.gov/cpi/tables/seasonal-adjustment/seasonal-factors-2023.xlsx). For more information on data revision scheduling, please see the Factsheet on Seasonal Adjustment at [www.bls.gov/cpi/seasonal-adjustment/questions-and-answers.htm](http://www.bls.gov/cpi/seasonal-adjustment/questions-and-answers.htm) and the Timeline of Seasonal Adjustment Methodological Changes at [www.bls.gov/cpi/seasonal-adjustment/timeline-seasonal-adjustment-methodology-changes.htm](http://www.bls.gov/cpi/seasonal-adjustment/timeline-seasonal-adjustment-methodology-changes.htm).

### *How to Use Seasonally Adjusted and Unadjusted Data*

For analyzing short-term price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from weather events, production cycles, model changeovers, holidays, and sales. This allows data users to focus on changes that are not typical for the time of year.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index before adjustment for seasonal variation. BLS advises against the use of seasonally adjusted data in escalation agreements because seasonally adjusted series are revised annually.

#### *Intervention Analysis*

The Bureau of Labor Statistics uses intervention analysis seasonal adjustment (IASA) for some CPI series. Sometimes extreme values or sharp movements can distort the underlying seasonal pattern of price change. Intervention analysis seasonal adjustment is a process by which the distortions caused by such unusual events are estimated and removed from the data prior to calculation of seasonal factors. The resulting seasonal factors, which more accurately represent the seasonal pattern, are then applied to the unadjusted data.

For example, this procedure was used for the motor fuel series to offset the effects of the 2009 return to normal pricing after the worldwide economic downturn in 2008. Retaining this outlier data during seasonal factor calculation would distort the computation of the seasonal portion of the time series data for motor fuel, so it was estimated and removed from the data prior to seasonal adjustment. Following that, seasonal factors were calculated based on this “prior adjusted” data. These seasonal factors represent a clearer picture of the seasonal pattern in the data. The last step is for motor fuel seasonal factors to be applied to the unadjusted data.

For the seasonal factors introduced for January 2023, BLS adjusted 57 series using intervention analysis seasonal adjustment, including selected food and beverage items, motor fuels and vehicles.

#### *Revision of Seasonally Adjusted Indexes*

Seasonally adjusted data, including the U.S. city average all items index levels, are subject to revision for up to 5 years after their original release. Every year, economists in the CPI calculate new seasonal factors for seasonally adjusted series and apply them to the last 5 years of data. Seasonally adjusted indexes beyond the last 5 years of data are considered to be final and not subject to revision. For January 2023, revised seasonal factors and seasonally adjusted indexes for 2018 to 2022 were calculated and published. For series which are directly adjusted using the Census X-13ARIMA-SEATS seasonal adjustment software, the seasonal factors for 2022 will be applied to data for 2023 to produce the seasonally adjusted 2023 indexes. Series which are indirectly seasonally adjusted by summing seasonally adjusted component series have seasonal factors which are derived and are therefore not available in advance.

#### *Determining Seasonal Status*

Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. Using these criteria, BLS economists determine whether a series should change its status from "not seasonally adjusted" to "seasonally adjusted", or vice versa. If any of the 81 components of the U.S. city average all items index change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used in the aggregation of the dependent series for the last 5 years, but the seasonally adjusted indexes before that period will not be changed. For 2023, 37 of the 81 components of the U.S. city average all items index are not seasonally adjusted.

<sup>1</sup> Foods, fuels, and several other items are priced every month in all areas. Most other goods and services are priced as indicated: M - Every month.

<sup>1</sup> 1 - January, March, May, July, September, and November. 2 - February, April, June, August, October, and December.

<sup>2</sup> Regions defined as the four Census regions.

<sup>3</sup> Indexes on a December 1996=100 base.

<sup>4</sup> Indexes on a December 2017=100 base.

<sup>5</sup> Indexes on a December 1986=100 base.

<sup>6</sup> 1998 - 2017 indexes based on substantially smaller sample.

<sup>7</sup> Indexes on a December 2001=100 base.

<sup>8</sup> Indexes on a 1987=100 base.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

<sup>1</sup> The C-CPI-U is designed to be a closer approximation to a cost-of-living index in that it, in its final form, accounts for any substitution that consumers make across item categories in response to changes in relative prices. Since the expenditure data required for the calculation of the C-CPI-U are available only with a time lag, the C-CPI-U is issued first in preliminary form using the latest available expenditure data at that time and is subject to four revisions.

Indexes are issued as initial estimates. Indexes are revised each quarter with the publication of January, April, July, and October data as updated expenditure estimates become available. The C-CPI-U indexes are updated quarterly until they become final. January-March indexes are final in January of the following year; April-June indexes are final in April of the following year; July-September indexes are final in July of the following year; October-December indexes are final in October of the following year.

<sup>1</sup> The 'effect' of an item category is a measure of that item's contribution to the All items price change. For example, if the Food index had an effect of 0.40, and the All items index rose 1.2 percent, then the increase in food prices contributed 0.40 / 1.2, or 33.3 percent, to that All items increase. Said another way, had food prices been unchanged for that month the change in the All items index would have been 1.2 percent minus 0.40, or 0.8 percent. Effects can be negative as well. For example, if the effect of food was a negative 0.1, and the All items index rose 0.5 percent, the All items index actually would have been 0.1 percent higher (or 0.6 percent) had food prices been unchanged. Since food prices fell while prices overall were rising, the contribution of food to the All items price change was negative (in this case, -0.1 / 0.5, or minus 20 percent).

<sup>2</sup> A statistic's margin of error is often expressed as its point estimate plus or minus two standard errors. For example, if a CPI category rose 0.6 percent, and its standard error was 0.15 percent, the margin of error on this item's 1-month percent change would be 0.6 percent, plus or minus 0.3 percent.

<sup>3</sup> If the current seasonally adjusted 1-month percent change is greater than the previous published 1-month percent change, then this column identifies the closest prior month with a 1-month percent change as (L)arge as or (L)arger than the current 1-month change. If the current 1-month percent change is smaller than the previous published 1-month percent change, the most recent month with a change as (S)mall or (S)maller than the current month change is identified. If the current and previous published 1-month percent changes are equal, a dash will appear. Standard numerical comparisons are used. For example, 0.8% is greater than 0.6%, -0.4% is less than -0.2%, and -0.2% is less than 0.0%. Note that a (L)arger change can be a smaller decline, for example, a -0.2% change is larger than a -0.4% change, but still represents a decline in the price index. Likewise, (S)maller changes can be increases, for example, a 0.6% change is smaller than 0.8%, but still represents an increase in the price index. In this context, a -0.2% change is considered to be smaller than a 0.0% change.

<sup>4</sup> Not seasonally adjusted.

<sup>5</sup> Indexes on a December 1997=100 base.

<sup>6</sup> Special indexes based on a substantially smaller sample. These series do not contribute to the all items index aggregation and therefore do not have a relative importance or effect.

<sup>7</sup> Indexes on a December 2007=100 base.

<sup>8</sup> Indexes on a December 2005=100 base.

<sup>9</sup> Indexes on a December 1986=100 base.

Commodities less food and beverages.....	24.174	0.1	0.025	0.20	L-Feb.2023	0.5
Services.....	61.614	5.2	3.142	0.18	S-Mar.2022	5.1
Services less rent of shelter <sup>15</sup> .....	27.234	2.8	0.761	0.21	S-Mar.2021	1.8
Services less medical care services.....	55.284	6.1	3.321	0.19	S-May 2022	6.0
Durables.....	12.412	-2.2	-0.276	0.30	S-Oct.2017	-2.2

See footnotes at end of table.

**Table 7. Consumer Price Index for All Urban Consumers (CPI-U): U.S. city average, by expenditure category, September 2023, 12-month analysis table — Continued**  
 [1982-84=100, unless otherwise noted]

Expenditure category	Relative importance Aug. 2023	Twelve Month				
		Unadjusted percent change Sep. 2022-Sep. 2023	Unadjusted effect on All Items Sep. 2022-Sep. 2023 <sup>1</sup>	Standard error, median price change <sup>2</sup>	Largest (L) or Smallest (S) unadjusted change since: <sup>3</sup>	
					Date	Percent change
Nondurables.....	25.973	3.2	0.834	0.16	L-Apr.2023	3.2
Nondurables less food.....	12.593	2.7	0.337	0.26	L-Feb.2023	3.1
Nondurables less food and beverages.....	11.761	2.6	0.301	0.28	L-Feb.2023	2.9
Nondurables less food, beverages, and apparel.....	9.236	2.6	0.236	0.32	L-Feb.2023	2.8
Nondurables less food and apparel.....	10.068	2.8	0.272	0.28	L-Feb.2023	3.0
Housing.....	44.448	5.6	2.415	0.22	S-Dec.2021	5.1
Education and communication <sup>4</sup> .....	5.660	1.0	0.062	0.28	—	—
Education <sup>4</sup> .....	2.235	2.9	0.066	0.29	—	—
Communication <sup>4</sup> .....	3.425	-0.1	-0.004	0.41	L-Jul.2023	-0.1
Information and information processing <sup>4</sup> .....	3.353	-0.2	-0.008	0.41	L-Jul.2023	-0.2
Information technology, hardware and services <sup>17</sup> .....	1.755	-0.8	-0.012	0.81	L-Mar.2022	1.8
Recreation <sup>4</sup> .....	5.320	3.9	0.202	0.38	L-Jul.2023	4.1
Video and audio <sup>4</sup> .....	1.269	4.0	0.050	0.59	L-Jun.2021	4.0
Pets, pet products and services <sup>4</sup> .....	1.213	5.7	0.067	0.70	S-Feb.2022	5.5
Photography <sup>4</sup> .....	0.060	3.7	0.002	1.76	L-Jun.2023	5.5
Food and beverages.....	14.212	3.7	0.534	0.19	S-Aug.2021	3.7
Domestically produced farm food.....	7.161	2.4	0.170	0.30	S-Jun.2021	0.9
Other services.....	9.359	4.4	0.417	0.20	L-Jul.2023	4.4
Apparel less footwear.....	2.021	2.7	0.064	1.00	S-Sep.2021	2.5
Fuels and utilities.....	4.524	-1.5	-0.076	0.62	S-Apr.2016	-2.1
Household energy.....	3.457	-3.4	-0.131	0.80	S-Apr.2016	-3.9
Medical care.....	7.797	-1.4	-0.118	0.34	S-EVER	—
Transportation.....	17.339	2.4	0.380	0.30	L-Feb.2023	2.6
Private transportation.....	16.627	3.0	0.459	0.29	L-Jan.2023	3.2
New and used motor vehicles <sup>4</sup> .....	8.075	-1.8	-0.173	0.35	S-Mar.2009	-2.3
Utilities and public transportation.....	7.535	-1.0	-0.081	0.41	S-Jun.2020	-1.3
Household furnishings and operations.....	5.175	1.9	0.100	0.49	S-Jul.2020	1.5
Other goods and services.....	2.699	6.0	0.160	0.33	L-Jul.2023	6.1
Personal care.....	2.200	6.1	0.132	0.36	L-Jul.2023	6.1

<sup>1</sup> The 'effect' of an item category is a measure of that item's contribution to the All items price change. For example, if the Food index had an effect of 0.40, and the All items index rose 1.2 percent, then the increase in food prices contributed 0.40 / 1.2, or 33.3 percent, to that All items increase. Said another way, had food prices been unchanged for that year the change in the All items index would have been 1.2 percent minus 0.40, or 0.8 percent. Effects can be negative as well. For example, if the effect of food was a negative 0.1, and the All items index rose 0.5 percent, the All items index actually would have been 0.1 percent higher (or 0.6 percent) had food prices been unchanged. Since food prices fell while prices overall were rising, the contribution of food to the All items price change was negative (in this case, -0.1 / 0.5, or minus 20 percent).

<sup>2</sup> A statistic's margin of error is often expressed as its point estimate plus or minus two standard errors. For example, if a CPI category rose 2.6 percent, and its standard error was 0.25 percent, the margin of error on this item's 12-month percent change would be 2.6 percent, plus or minus 0.5 percent.

<sup>3</sup> If the current 12-month percent change is greater than the previous published 12-month percent change, then this column identifies the closest prior month with a 12-month percent change as (L)arge as or (L)arger than the current 12-month change. If the current 12-month percent change is smaller than the previous published 12-month percent change, the most recent month with a change as (S)mall or (S)maller than the current month change is identified. If the current and previous published 12-month percent changes are equal, a dash will appear. Standard numerical comparison is used. For example, 2.0% is greater than 0.6%, -4.4% is less than -2.0%, and -2.0% is less than 0.0%. Note that a (L)arger change can be a smaller decline, for example, a -0.2% change is larger than a -0.4% change, but still represents a decline in the price index. Likewise, (S)maller changes can be increases, for example, a 0.6% change is smaller than 0.8%, but still represents an increase in the price index. In this context, a -0.2% change is considered to be smaller than a 0.0% change.

<sup>4</sup> Indexes on a December 1997=100 base.

<sup>5</sup> Special indexes based on a substantially smaller sample. These series do not contribute to the all items index aggregation and therefore do not have a relative importance or effect.

<sup>6</sup> Indexes on a December 2007=100 base.

<sup>7</sup> Indexes on a December 2005=100 base.

<sup>8</sup> Indexes on a December 1986=100 base.

<sup>9</sup> Indexes on a December 1993=100 base.

<sup>10</sup> Indexes on a December 2009=100 base.

<sup>11</sup> Indexes on a December 1990=100 base.

<sup>12</sup> Indexes on a December 1983=100 base.

<sup>13</sup> Indexes on a December 2001=100 base.

<sup>14</sup> Indexes on a December 2019=100 base.

<sup>15</sup> Indexes on a December 1982=100 base.

<sup>16</sup> Indexes on a December 1996=100 base.

<sup>17</sup> Indexes on a December 1988=100 base.
